**DETAILED ACTION**

***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 23 September 2003 has been entered.

***Claim Rejections - 35 USC § 112***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 3, 4, 6-18, 20-26, and 31-33 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The instant claims have been amended to specify that the fixing device is between a combination of either a fixing roller or a fixing belt and either a pressure roller or a pressure belt. A review of the specification shows various fixing devices disclosed, particularly with reference to Figures 15, 17, and 18. Figure 15 shows the combination of a fixing roller **17a** having a heating means and a pressure roller **17b** (also see spec. p. 133, top). The specification also discloses the combination of a fixing roller **17a** having a heating means and a pressure belt **27b** (see Fig. 17 & spec. pp. 139-140). The specification

Art Unit: 1756

also discloses a specific combination of fixing belt having the construction show in Figure 18 with a fixing roller **47b**. The specification as filed does not provide basis for a fixing belt or roller without a heating means. Further, the specification only provides basis for fixing belt when in the construction of Figure 18. Upon review of the specification there does not appear to be basis for a fixing belt and a pressure belt as discussed in the Advisory Action.

If applicants believe there is basis for the claims as currently presented fixing devices in the claimed methods they are asked to refer the Examiner to each appropriate passage in the specification for each combination of a fixing roller or a fixing belt with a pressure roller or a pressure belt as currently claimed, and where the fixing roller or belt is not required to contain a heating means in the manner described by the specification.
